EXPERIENCE

Jul 2023 – Present

Speridian Infosystems – DMCC

Client: Emirates NBD, Dubai

Key Responsibilities:

- Steering Change Request (CR) Initiative to provide business users with enhanced functionality that helps bank to serve customers with .
- Responsible for handling CR throughout its life cycle: requirement gathering, cost and feasibility analysis, architectural review, preparing build and test plan, delivery, testing and its deployment into production with support until stabilized.
- Successfully delivered changes in last 1 year: **VISA 8 digit bin customization**, **ATM Cash Withdrawal Fee** collection/waiver based on CIF segment, **VISA Settlement File Enhancements** in Finacle, **CAPEX approved CRs for Liabilities**, etc.
- Reviewing SIT test plan, supporting business users across UAT, executing performance and regression tests, adhering to security and resiliency standards and ensuring technical and business sanity post production deployment.
- Performing post go-live review of changes implemented in production to analyse its impact on existing functionality and taking it as feedback to deliver more value cum performance-based solutions in future.
- Prioritizing and ensuring all CRs are delivered on or before deadline to avoid any business impact, regulatory violations or revenue leakage.

Jun 2021 – Jun2023

Credit Suisse, India

Key Responsibilities:

- Leading Production Support Team to ensure business continuity and reduce impact of any issues to business users and customers by providing quick resolution.
- SRE Review of changes planned for production to understand and review the nature of change and its potential impact on the daily operations and activities.
- Defining parameters for automated alerts to notify users of any incident that can be prevented before it can cause impact on the business and service availability.
- Applying ITSM and SRE DevOps principles to create value and maintain focus on reducing manual tasks(toil) and replace it with automation where necessary to save time and efforts of support team and actively focus on value creating tasks.
- Working with multiple vendor/channel partners to cater business requirements and making core banking application more adaptive fault tolerant with other systems.
- Execute blameless post-mortems for issues in production environment, identifying the root cause, analysing the impact and applying workaround (if required) along with plan for permanent fix to close the incident/issue.
- Define and monitor Service Level Indicators (SLIs) that can help achieving Service Level Agreement/Objective efficiently.

Aug 2020 – May 2021

Best of Breed Software Solutions, Pune, India

Clients: Credit Suisse, India

Key Responsibilities:

- Leading Technical Team to develop and cater dynamic requirements to the client beyond product solution across Finacle modules so as to streamline transition from legacy system and to reduced cost efforts of development of new requirements from vendor.
- Providing post implementation support and handling smooth business transition from legacy system to Finacle with minimal Business Impact.
- Tracking and managing daily issues raised in BAU activities and providing solution until closure with quick turnaround time to optimise business impact.
- Monitoring and providing quick support for any EOD/BOD issues.

Aug 2015 – Jul 2020

EdgeVerve Systems Limited (India, Dubai - UAE)

Clients: Emirates NBD, Al Ahli Bank of Kuwait, Emirates Islamic Bank

Key Responsibilities:

- Providing Post Go-Live support to stabilise the implemented Core Banking solution.
- Design and development of robust APIs that can be exposed to third party channels like ATM, Cash/Cheque Deposit Machines, AML System, Internet/Mobile Banking.
- Development and Support of Payment solutions including Payment Systems like SWIFT, FTS, SARIE where payment messages are transmitted through channels like Java Message Queue, File System, etc.
- Supporting Project Implementation across testing cycles like SIT, UAT and BAT.
- Design and Development of requirement to incorporate VAT as newly introduced tax in UAE within Payments and Core Banking solution.
- Product bug simulation and fixing with unit testing.
- Development and support of UML tool to automate script development process which reduced human-equation error and efforts by up to 80 percent.
- Designed and developed automated extracts and report that can be used for data analysis by audit and control team.
- Fine-tuning batch programs to reduce execution time for end of day process.

Mar 2014 – Jul 2015

Infosys Limited, Pune, India

Clients: Emirates NBD
